

## PHYSICS LAB

***"Without Laboratories men of science are soldiers without arm."***

**Louis Pasteur**

*By knowing the correct method and procedures a science student can perform an experiment whose results can amaze the world. It is a science lab where a child finds practical implementation to the theoretical knowledge lectured to him in the class. Scientific ventures, experiments, practical arouses the scientific temper within him leaves a permanent impression on his brain with the very clear concept of the thing. A laboratory activity provides experience with phenomenon, which is a starting place for the systematic development of student's ideas and thoughts. A science lab should engage the students so as to acquire the problem solving skill, manipulating materials and apparatus, changing informal discussions to formal reports etc. Our Physics lab is a well equipped with scientific instruments which helps in the systematic development of the various skills of the students. The lab is well furnished and properly ventilated. All the necessary and basic facilities for performing an experiment have been provided to ease the students in the lab where the students can understand the difference between theory and application. Our physics lab in short provides our budding scientist-*

-  *hands on experience*
  -  *learning by doing*
  -  *working in collaboration*
-
